# Our Road to Binance: From Binance Alpha to Spot

我们通往币安之路：从 Binance Alpha 到现货上市

We are SixSixSix (SSS), and this is our map, published in our own words. What Binance Alpha actually is, how tokens get chosen, how small the odds of reaching Spot really are, what it costs, and every stage we have to walk from where we stand today — starting with our plan to buy back 30–50% of our own supply.

我们是 SixSixSix（SSS）。这是我们以项目方身份发布的路线图：Binance Alpha 到底是什么、代币如何被选中、最终上市现货的概率有多低、需要付出什么成本，以及我们从今天的位置出发必须走过的每一个阶段——第一步，就是回购我们总供应量的 30–50%。

**The short version:** The path is staged — **Alpha → Futures → Spot** — and every stage is judged on fundamentals, secondary-market metrics, user engagement, and compliance. Binance states that being featured on Alpha **does not guarantee** a Spot listing. Our order is clear: finish the mint → get audited → open the PancakeSwap pool → list on CoinGecko / CoinMarketCap → grow real volume and holders → join BNB Chain ecosystem programs → list on smaller exchanges → then apply to Alpha.

简要版：路径是分阶段的——Alpha → 合约 → 现货——每个阶段都按基本面、二级市场指标、用户参与度和合规来评审。币安明确表示，上线 Alpha 不保证现货上市。我们的顺序很明确：完成铸造 → 完成审计 → 开启 PancakeSwap 池 → 上线 CoinGecko / CoinMarketCap → 增长真实交易量与持有者 → 加入 BNB Chain 生态计划 → 上线中小型交易所 → 再申请 Alpha。

| WHERE WE ARE / 当前阶段 | EPOCH 1 / 第 1 期 | TOTAL SUPPLY / 总供应 | OUR TARGET PRICE / 目标价格 |
|---|---|---|---|
| **Stage 0 of 10**<br>Epoch 1 is minting<br>第 1 期正在铸造 | **3 / 2,000**<br>shares · 37,200 across 12 epochs<br>共 12 期，37,200 份 | **666,666,666**<br>SSS | **$0.0056**<br>per SSS · 每枚 SSS |

## Our target price, stated plainly · 明确说明我们的目标价格

**Our project target price for SSS is around $0.0056 per token.** Every buyback and market-cap calculation in this document is built on that target price, so our community can check our math. It is our target — not a market price, because our trading pool is not open yet — and the real cost of any future buyback will follow the market price at the time we execute it.

**本项目的目标价格是每枚 SSS 约 0.0056 美元。**本文所有回购与市值计算都以这个目标价格为基础，方便社区核对。需要说明：这是我们的目标价，不是市场价，因为交易池尚未开启；未来真正执行回购时，实际成本将以当时的市场价格为准。

Published by the SixSixSix team · 12 November 2026 · Sources: official Binance announcements and FAQs plus analyst publications, listed on the last page. OFFICIAL = stated by Binance · ANALYST = third-party reporting.
由 SixSixSix 团队发布 · 2026 年 11 月 12 日 · 来源见最后一页。OFFICIAL = 币安官方表述；ANALYST = 第三方分析报道。

# 01 Our Buyback Plan: The Numbers at $0.0056

我们的回购计划：按 0.0056 美元计算的数字

Once all shares in Epochs 1–12 are sold and SSS sits in the hands of our holders, **we will buy back around 30–50% of the total supply** from the open market. We will never take tokens from holder wallets. Funding comes from the 1% trade-tax allocation to our treasury and/or the project's own funds.

当第 1–12 期份额全部售出、SSS 全部由持有者持有后，我们将从公开市场回购总供应量的约 30–50%。我们绝不会从持有者的钱包中取走代币。资金来自交易税中分配给金库的 1%，和/或项目自有资金。

## Where the supply stands · 当前供应分布

| ITEM / 项目 | SSS | SHARE / 占比 | VALUE @ $0.0056 |
|---|---|---|---|
| Total supply / 总供应量 | 666,666,666 | 100% | $3,733,333 |
| Held by holders today / 目前持有者持有<br>3 Mode A shares minted (Epoch 1, 97dzy.ai) x 1,286 SSS | 3,858 | 0.0006% | $21.60 |
| Still in our Mint contract / 仍在铸造合约中<br>To be distributed across Epochs 1–12 (37,200 shares) | 666,662,808 | 99.9994% | $3,733,312 |
| **Market cap if all SSS is held by holders, at our target price<br>全部由持有者持有时，按目标价计算的市值（= 完全稀释市值）** | **666,666,666** | **100%** | **$3,733,333** |

At our target price, market cap and fully diluted valuation are the same number — $3,733,333 — because our total supply is fixed at 666,666,666 SSS with no further minting. Today's circulating market cap, based only on the 3,858 SSS already minted to a holder, is $21.60 at the same target price.

按目标价计算，市值与完全稀释估值相同，都是 3,733,333 美元，因为总供应量固定为 666,666,666 枚，不再增发。目前按已铸造给持有者的 3,858 枚计算，流通市值仅为 21.60 美元。

## How much we must prepare, by buyback target · 按回购目标需要准备的资金

| BUYBACK / 回购比例 | SSS BOUGHT BACK | FUNDS @ $0.0056 | SSS LEFT CIRCULATING | MARKET CAP LEFT |
|---|---|---|---|---|
| 30% | 200,000,000 | $1,120,000 | 466,666,666 | $2,613,333 |
| 35% | 233,333,333 | $1,306,667 | 433,333,333 | $2,426,667 |
| **40% (midpoint / 中间值)** | **266,666,666** | **$1,493,333** | **400,000,000** | **$2,240,000** |
| 45% | 300,000,000 | $1,680,000 | 366,666,666 | $2,053,333 |
| 50% | 333,333,333 | $1,866,667 | 333,333,333 | $1,866,667 |

**Our planning figure is therefore $1.12M–$1.87M at our target price**, with $1,493,333 at the 40% midpoint. The exact percentage will be set when we execute — the range, not a single fixed number, is our commitment.

因此，按目标价计算，我们需要准备的资金是 112 万至 187 万美元，40% 中间值为 1,493,333 美元。确切比例将在执行时确定——我们的承诺是这个区间，而不是某个固定数字。

# 02 Funding the Buyback — and What Happens If Market Cap Rises

回购资金来源——以及市值上涨时会发生什么

### Source A — Our 1% trade tax · 交易税

Our swap tax is 2%: 1% to the treasury and 1% to auto-liquidity. Only the treasury's 1% can accumulate toward the buyback.

我们的交易税为 2%：1% 进入金库，1% 用于自动添加流动性。只有金库的 1% 可以积累用于回购。

### Source B — Project funds · 项目自有资金

Topping up from our own funds speeds up execution and removes full dependence on trading volume. Our plan: let the tax accumulate through all 12 epochs, then close the gap with project funds.

用自有资金补足可以加快执行，也不必完全依赖交易量。我们的计划是：先让交易税在 12 期内积累，执行时再用项目资金补足差额。

## Trading volume needed if the buyback were funded by the 1% tax alone

如果回购完全靠 1% 交易税，需要的交易量

| BUYBACK TARGET / 回购目标 | FUNDS NEEDED @ $0.0056 | VOLUME NEEDED @ 1% TAX |
|---|---|---|
| 30% | $1,120,000 | $112,000,000 |
| 40% | $1,493,333 | $149,333,333 |
| 50% | $1,866,667 | $186,666,667 |

That scale tells its own story: the tax-only path becomes realistic only once our market is genuinely alive and sustained. That is why we combine both sources.

这个量级说明了一切：只有当市场真正活跃并持续交易时，单靠交易税才现实。因此我们会结合两种资金来源。

# 02 If Market Cap Rises Above Our Target

如果市值涨到目标价之上

## If the price — and market cap — rises above our target

| PRICE / 价格 | MARKET CAP (ALL SUPPLY) | COST OF A 40% BUYBACK | COST OF A 50% BUYBACK |
|---|---|---|---|
| **$0.0056 — our target / 目标价** | **$3,733,333** | **$1,493,333** | **$1,866,667** |
| $0.0100 | $6,666,667 | $2,666,667 | $3,333,333 |
| $0.0250 | $16,666,667 | $6,666,667 | $8,333,333 |
| $0.0500 | $33,333,333 | $13,333,333 | $16,666,667 |
| $0.1000 | $66,666,667 | $26,666,667 | $33,333,333 |

A higher market cap is good for our holders — and it makes the same percentage buyback more expensive for us. We publish this table so nobody can say we hid that trade-off.

市值越高，对持有者越好——但对我们来说，同样比例的回购也会越贵。我们公开这张表，就是不想隐藏这个取舍。

### Why a large buyback connects to our Binance goal · 回购与币安目标的关系

For tokens already in circulation, Binance assesses **token distribution and liquidity** OFFICIAL. A transparent market buyback shrinks circulating supply, gives us a reserve for needs such as a Binance user-airdrop budget (page 10), and — if the result is publicly locked or burned — strengthens our tokenomics at review time. Honestly: a buyback is **not** an official listing requirement. It is our tokenomics lever, not a shortcut.

对于已流通的代币，币安会评估代币分布与流动性。透明的市场回购可以减少流通供应，为币安用户空投预算等需求留出储备；如果回购结果公开锁定或销毁，也能强化评审时的代币经济学。但必须诚实说明：回购不是官方上市要求，它是我们的代币经济学工具，不是捷径。

# 03 The Road Ahead: 10 Stages (1 of 2)

前方的路：10 个阶段（第一部分）

### Stage 0 — Foundations · 基础 — WE ARE HERE / 我们在这里

We complete our 12-epoch mint (37,200 shares). Our contracts are verified on BscScan (done — SSS and Mint). We publish transparent tokenomics, form a legal entity, and our team goes public. Without an audit, later stages will block us.

完成 12 期铸造（37,200 份）。合约已在 BscScan 验证（已完成）。我们公开透明的代币经济学，成立法律实体，团队公开身份。没有审计，后续阶段会被卡住。

### Stage 1 — Security: an independent audit · 安全审计

We will have our contracts audited by a recognized firm — CertiK, PeckShield, SlowMist, or Hacken — fix the findings, and move our treasury to a multisig. Technical Risk Assessment is one of Binance's 11 official review areas. OFFICIAL

我们将请知名机构（CertiK、PeckShield、SlowMist 或 Hacken）审计合约，修复问题，并将金库迁移到多签钱包。技术风险评估是币安 11 个官方评审领域之一。

### Stage 2 — DEX listing: our PancakeSwap pool · 去中心化交易所

Permissionless — no approval, no listing fee. We create an SSS/BNB or SSS/USDT pool, seed initial liquidity, and lock the LP tokens. For us this unlocks once Epoch 1 fills (2,000 shares) and we call `openPool()`, with no owner seed.

无需许可、无上市费。我们将创建 SSS/BNB 或 SSS/USDT 池，注入初始流动性并锁定 LP 代币。第 1 期满额（2,000 份）后，我们调用 openPool() 即可开启，无需项目方预置种子流动性。

### Stage 3 — Visibility: CoinGecko & CoinMarketCap · 曝光

CoinGecko: free application; our token must already trade actively on a tracked exchange, with a working website and block explorer. CoinMarketCap: free form; requires active trading with material volume on at least one tracked exchange; review takes days to months. ANALYST

CoinGecko 免费申请，要求代币已在被收录的交易所活跃交易，并有可用的网站和区块浏览器。CoinMarketCap 免费申请，要求在至少一家被收录的交易所有实质交易量，审核时间为数天到数月不等。

### Stage 4 — Traction: real holders, volume, community · 真实 traction

The longest stage, and the one that decides everything: sustained organic volume, deep liquidity, holder growth and distribution, genuine product usage. Binance emphasises real users, not follower counts. For us, activity is driven by Mode A 24-hour claims, Mode B daily vesting, and new minters in every epoch.

这是最长、也决定一切的阶段：持续的自然交易量、充足的流动性、持有者增长与分布、真实的产品使用。币安看重的是真实用户，而不是粉丝数量。我们的活跃度来自 A 模式 24 小时领取、B 模式每日释放，以及每一期的新铸造者。

# 04 The Road Ahead: 10 Stages (2 of 2)

前方的路：10 个阶段（第二部分）

### Stage 5 — BNB Chain ecosystem programs · BNB Chain 生态计划

We will apply to MVB, now a dedicated track under YZi Labs EASY Residency: funding up to $500,000, rolling applications. MVB requires core business on BNB Chain with contracts deployed there — a pattern we already meet. YZi Labs has also announced a $1B builder fund for the BNB ecosystem.

ANALYST

我们将申请 MVB——现为 YZi Labs EASY Residency 的专门赛道，资助最高 50 万美元，滚动申请。MVB 要求核心业务在 BNB Chain 上运行、合约部署在那里，我们已经符合。YZi Labs 还宣布了 10 亿美元的 BNB 生态建设基金。

### Stage 6 — Smaller exchanges · 中小型交易所

Listing on tier-2/3 exchanges is the usual stepping stone before Binance; each has its own application and often a fee. Venue reputation matters in Binance's review.

上线二三线交易所是通往币安的常见跳板，每家都有自己的申请流程，通常收取费用。交易所的声誉很重要，币安评审时会一并考量。

### Stage 7 — Binance Alpha · OUR FIRST TARGET / 第一目标

Our founder applies directly through the Binance Alpha application form, with KYC — or we are selected on traction. A third-party application means disqualification and blacklisting. No fee, no guarantee. OFFICIAL

我们的创始人将通过 Binance Alpha 申请表直接申请并完成 KYC，或凭 traction 被选中。第三方代申请意味着取消资格并被拉黑。无费用，也无保证。

### Stage 8 — Binance Futures · 币安合约

Alpha projects that perform strongly can advance to Futures, judged on fundamentals, secondary-market metrics, user engagement, and compliance. OFFICIAL

在 Alpha 表现强劲的项目可以晋级合约市场，评审依据包括基本面、二级市场指标、用户参与度和合规标准。

### Stage 9–10 — Binance Spot, then keeping it · 现货上市，并保持上市

A direct Spot listing, or promotion from Alpha/Futures after the full 11-area review. Official listing fee: 0 BNB — but agreements typically include a token budget for user airdrops and marketing (page 10). Listing is not the finish line: review continues, and tokens can receive a Monitoring Tag and be delisted.

直接现货上市，或通过完整的 11 项评审后从 Alpha/合约晋级。官方上市费为 0 BNB，但协议通常包含用于用户空投和营销的代币预算（见第 10 页）。上市不是终点：评审会持续，代币可能被打上监控标签并被下架。

### An honest word on timelines · 关于时间线的实话

We measure this in **months** of building trading history and traction, not days of waiting on a review. Binance publishes no review timeline, and most applicants never hear back — which is why Stage 4 (traction) matters far more than the moment we submit a form.

我们以月为单位来衡量这条路。币安没有公布审核时间表，大多数申请者不会收到回复——这正是第 4 阶段（traction）远比提交表格更重要的原因。

# 05 What Binance Alpha Is — and How We Get In

Binance Alpha 是什么——我们如何进入

Binance Alpha is a **pre-listing platform inside Binance Wallet** that spotlights early-stage projects with growth potential, launched 17 December 2024. Binance's December 2025 framework describes it as a pre-listing token selection pool, with paths such as Pre-TGE, TGE, Alpha Airdrops, and the Booster program. OFFICIAL

Binance Alpha 是 Binance Wallet 内的上市前平台，于 2024 年 12 月 17 日推出，聚焦有增长潜力的早期项目。币安 2025 年 12 月的框架将其描述为上市前代币遴选池，包含 Pre-TGE、TGE、Alpha 空投和 Booster 等路径。

One rule matters to us as issuers: **tokens bought on Alpha cannot be withdrawn until the token lists on Binance Spot** — before that, the only exit is trading inside Alpha. OFFICIAL

对发行方很重要的一条规则：在 Alpha 买入的代币，在现货上市之前不能提现，此前唯一的退出方式是在 Alpha 内交易。

### There is an application form

- Official Alpha application form for "Alpha Featuring" (Dec 2025 framework).
- Must be filled in **directly by a founder or core team member**, with KYC.
- Third-party applications: **disqualification + blacklist**.

有官方申请表，必须由创始人或核心团队成员亲自填写并完成 KYC。第三方代申请将被取消资格并拉黑。

### Selection is still Binance's call

- Tokens are selected on strong community interest, growing traction, and alignment with key trends.
- Binance does not accept token suggestions from users.
- No agency or market maker can guarantee selection.

最终选择仍由币安决定，依据是社区关注度、持续增长的 traction 和与趋势的契合。任何机构都无法保证入选。

> *"Some tokens highlighted on Binance Alpha may be considered for listings on Binance Exchange in the future, while not guaranteed."*
>
> — Binance, official FAQ on Binance Alpha · 币安 Alpha 官方常见问题

# 05 The 11 Areas Binance Reviews

币安评审的 11 个领域

## The 11 areas Binance officially reviews · 币安官方评审的 11 个领域

| | | |
|---|---|---|
| 01 Product Quality / 产品质量 | 02 Genuine Product Traction / 真实产品 traction | 03 Utility / 实用性 |
| 04 User Metrics / 用户指标 | 05 Business Model & Revenue / 商业模式与收入 | 06 Growth Potential / 增长潜力 |
| 07 Tokenomics / 代币经济学 | 08 Team Background / 团队背景 | 09 Technical Risk / 技术风险评估 |
| 10 Compliance & Regulatory / 合规与监管 | 11 User Protection / 用户保护 | For tokens in circulation, Binance also assesses performance, volume, valuation, liquidity, and distribution. / 对已流通代币，还评估表现、交易量、估值、流动性与分布。 |

For our part, we hold ourselves to the concrete expectations behind those areas: a legal entity with verified founders, verified contract code, a full audit by a recognized firm, transparent admin permissions and multisig, clear tokenomics, a working product, and real user traction. Common rejection reasons, per analysts: anonymous teams and hidden supply data. We intend to fail on neither.

我们用这些领域背后的具体标准要求自己：有经验证创始人的法律实体、已验证的合约代码、知名机构的完整审计、透明的管理员权限与多签、清晰的代币经济学、可用的产品和真实的用户 traction。分析师指出，常见拒绝原因是匿名团队和隐藏供应数据——这两点我们都不会犯。

# 06 From Alpha to Spot: Our Odds, and the Real Cost

从 Alpha 到现货：概率与真实成本

## The graduation numbers · 晋级数据

| OUTCOME (OF 200 ALPHA TOKENS) / 结果（共 200 个 ALPHA 代币） | TOKENS | SHARE |
|---|---|---|
| **Reached Spot / 上市现货** | **35** | **17.5%** |
| Reached Futures / 上市合约 | 99 | 49.5% |
| Not yet through / 尚未晋级 | 66 | 33.0% |

Binance's own tally as of 28 April 2026, via Flexe.io. Futures and Spot are not necessarily mutually exclusive. Other analyst estimates put Alpha-to-Spot at about 9.5% to 17%, depending on the time window. About 43% of Binance Spot listings through 2025 had previously passed through Alpha (DropsTab estimate). ANALYST

数据来自币安截至 2026 年 4 月 28 日的统计（经 Flexe.io 引用）。其他分析师估计 Alpha 到现货的比例约为 9.5% 至 17%。2025 年币安现货新上市中，约 43% 此前经过 Alpha。

What the graduates share: proven performance **during their time on Alpha** — authentic volume, sustained liquidity, holder growth and distribution, and community traction. That is the standard we are building toward.

晋级者的共同点是：在 Alpha 期间有经证实的表现——真实交易量、持续流动性、持有者增长与分布、社区 traction。这正是我们努力达到的标准。

# 06 The Real Cost: 0 Fee, But a Token Budget

真实成本：零费用，但有代币预算

### The real cost: 0 fee, but a token budget · 真实成本：零费用，但有代币预算

> *"Binance does not charge any fee for project evaluations or listing applications."* — Binance, 17 Dec 2025. Spot announcements state "Listing Fee: 0 BNB".
>
> “币安对项目评估或上市申请不收取任何费用。”现货上市公告标注“上市费：0 BNB”。

What is not free is the **token allocation for Binance users**. Listing agreements include budget allocations for airdrops and marketing to users. OFFICIAL Observed in 2025: ANALYST

| PROGRAM / 计划 | SHARE OF SUPPLY / 供应占比 | ON OUR SUPPLY / 按我们的供应量 |
|---|---|---|
| HODLer Airdrops | 0.65% – 5% · median 1.5% | median ≈ 10,000,000 SSS |
| Launchpool | 1.5% – 4% | 10,000,000 – 26,666,667 SSS |
| Megadrop | 4% and 7% (two examples) | 26,666,667 – 46,666,667 SSS |

Terms are negotiated per project, not a fixed tariff. Our 30–50% buyback reserve gives us ample room for a requirement like this without taking anything from holders — one reason our plan is ordered the way it is: buyback first, negotiation later.

条款按项目逐个谈判，不是固定价格表。我们 30–50% 的回购储备足以覆盖这类需求，而无需动用持有者的代币——这正是我们先回购、后谈判的原因之一。

### Warning: listing-agent scams — our promise · 警告：上市中介骗局——我们的承诺

Binance does not appoint or endorse any listing agent. Anyone who promises us a listing for a fee is a scammer; applying through a third party means disqualification and blacklisting. Binance publishes a blacklist of intermediary names and offers up to $5M to whistleblowers (audit@binance.com). **We will never pay anyone who claims they can get us listed.**

币安不指定、也不认可任何上市中介。任何收费承诺帮我们上市的人都是骗子；通过第三方申请将被取消资格并拉黑。我们绝不会付钱给任何声称能帮我们上市的人。

# 07 Our Home Advantage — and an Honest Note on Thresholds

我们的主场优势——以及关于门槛的实话

## Building on BNB Chain · 在 BNB Chain 上构建

**There is no official fast lane.** No official Binance statement grants listing privileges to native BSC projects. Our advantage is practical: Alpha activity is structurally centred on BSC and the Binance Wallet ecosystem; ecosystem programs such as MVB / EASY Residency and BNB Chain grants build exactly the track record Binance reviews; and PancakeSwap, BSC's dominant exchange, plus cheap fees make the on-chain activity Alpha selection monitors inexpensive for us to build. ANALYST

没有官方快速通道。币安没有任何官方声明给予 BSC 原生项目上市特权。我们的优势是实际层面的：Alpha 活动在结构上以 BSC 和 Binance Wallet 生态为中心；MVB / EASY Residency、BNB Chain 资助等生态计划正好能积累币安评审看重的记录；而 PancakeSwap 和低廉的费用，让构建 Alpha 遴选所关注的链上活动成本很低。

## No minimum thresholds — officially · 官方没有最低门槛

We want to be straight about this: **Binance publishes no minimum thresholds at all** — no official figures for holder counts, 24-hour volume, followers, or market cap, for Alpha or for Spot. Numbers circulating online are analyst inferences, not official requirements. One contextual figure only: the Alpha 2.0 liquidity-provider program requires at least $1M in 24-hour limit-order volume for rebate eligibility — a rebate rule, not a listing requirement, which only hints at the scale of trading considered "real" on Alpha.

我们直说：币安没有公布任何最低门槛——无论 Alpha 还是现货，都没有官方的持有者数量、24 小时交易量、粉丝数或市值要求。网上流传的数字是分析师的推测，不是官方要求。只有一个参考数字：Alpha 2.0 流动性提供者计划要求 24 小时限价单交易量至少 100 万美元才有返佣资格——那是返佣规则，不是上市要求。

## Where we stand, in one line · 一句话总结我们的位置

We are at Stage 0: Epoch 1, 3 of 2,000 shares, 3,858 SSS in holder hands, a target price of $0.0056, a $3,733,333 target market cap at full distribution, and a buyback plan that needs $1,120,000–$1,866,667 at that price. The road is long, and we would rather walk it in the open than promise a date we cannot control.

我们处于第 0 阶段：第 1 期 2,000 份中已售 3 份，持有者持有 3,858 枚 SSS，目标价 0.0056 美元，全部发行后目标市值 3,733,333 美元，回购计划按目标价需要 1,120,000–1,866,667 美元。这条路很长，我们宁愿公开地走完它，也不承诺一个我们无法控制的日期。
